

24/7 dispensing of scrubs and linen using UHF RFID tracking

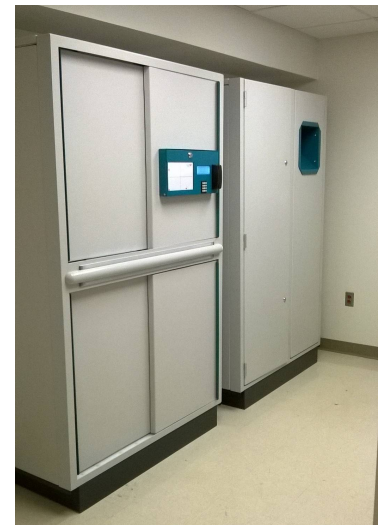

The affordable, intelligent solution to scrub loss

CabiNet is the intelligent alternative to vended scrubs or open carts.

CabiNet works with RFID chips fitted to each scrub item by your laundry. Users swipe their card to unlock a door and take what they need up to their credit limit.

Soiled items are dropped off in a separate bin and scanned automatically. Each CabiNet unit stores around 300 scrub pieces in a compact 4ft x 2ft footprint. The entire system is managed by DRESSCODE which displays stocks in real time and issues automated alerts if levels fall.

- **Easy to use, fast to load**
- **Sliding doors means that CabiNet fits almost anywhere**
- **Users must return soiled in order to collect clean**
- **Stores over 300 pieces**
- **Proven effective in hospitals**
- **Available on lease**
